Saldanha JW; Goldstein NI, Giorgio NA, Jones ST,

WPI; 1997-051897/05.

Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

Claim 1; Page 83; 112pp; English.

The present peptide is the complementarity determining region 2 (CDR2) from the heavy chain variable region of the reshaped human monoclonal antibody (MAD) H225, which is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in manas, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor

Sequence 16 AA;

The invention relates to a method for inhibiting the growth of tumours in human patients by treating with an effective amount of a combination of radiation and a non-radiolabelled protein receptor tyrosine kinase (PRTK) inhibitor, the overexpression of which can lead to tumourigenesis. The method can be used in the treatment of tumours of e.g. breast, lung, colon, kidney, bladder, head and neck, one of print makes the administration of a snitable antibody to

This invention relates to a method for inhibiting the growth of factor receptor (GGFR) in human parients. The method involves treating the patient with a combination of EGFR/human EGF-1 (HER1) antegonist, optionally with a chemotherapeutic agent or radiation. The antegonist can be for example a chimeric anti-EGFR monoclonal antibody, C25s. The EGFR/HER1 antagonist is useful for inhibiting the growth of refractory tumours such as tumours of breast, heart, lung, small intestine, colon, spleen, kidney, bladder, head and nack, ovary, prostate, brain, pancreas, skin, bone, bone marrow, blood, thymus, uterus, testicles, cervix and liver, preferably squamous cell carcinomas. The present sequence represents the heavy chain variable region complementarity determining region 2 amino acid sequence of the chimeric anti-EGFR monoclonal antibody C225 which is used in an example illustrating the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Epidermal growth factor receptor/human epidermal growth factor receptor-1 antagonist for inhibiting the growth of refractory tumors.
                                                                                                                            Refractory tumour growth inhibition, epidermal growth factor receptor; EGFR antagonist; cancer; squamous cell carcinoma; anti-EGFR antibody; complementarity determining region; CDR.
                                                                                            Anti-EGFR monoclonal antibody H chain V region CDR2 peptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

This invention relates to a novel method for treating a mammal with hyperproliferative disease stimulated by a ligand of a member of the epidermal growth factor (EGF) family of receptors. The method involves administering an antibody or a defective receptor that is an antagonist of a member of the EGF receptor family, or a combination of the antagonist and phototherapy, chemotherapeutic agent or radiation herapy. The antibody used in the method of the invention acts as an epidermal growth factor receptor (EGFR) antagonist by inhibiting EGFR /HERI phosphorylation. The method of the invention is useful for treating a mammal with hyperproliferative disease such as psoriasis, actinic stimulated by a ligand of a member of the EGF family of receptor. This sequence represents the mutine anti-EGF 255 antibody heavy chain (VH) hypervariable region (CDR2) used as an inhibitor of EGFR in the method of
                                                                                                                                                                                                                                                                                                                                                                                Treating a mammal with hyperproliferative disease especially psoriasis, stimulated by ligand of member of epidermal growth factor family of receptors, by administering antagonist of the receptor.

Homo sapiens

WO9640210-A1

```
The present peptide is the complementarity determining region 2 (CDR2) from the heavy chain variable region of the reshaped human monoclonal antibody (WAb) H225, which is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

```
The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAD) H225, 225RHD. The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour calls, especially late stage prostatic tumour calls in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Heavy chain; reshaped; monoclonal; antibody; 225RA; human; epidermal growth factor; EGF; receptor; inhibition; growth; tumour; cell; late stage; prostatic; prostate; variable region; framework; complementarity determining region; CDR.

                                                                                                                                                                                                                The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAb) H225, 225RHA. The MAb is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Heavy chain; reshaped; monoclonal; antibody; 225RC; human; epidermal growth factor; BGF; receptor; inhibition; growth; tumour; cell; late stage; prostatic; prostate; variable region; framework; complementarity determining region; CDR.
                                                                                                                                                              Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAD) H225, 225RHB. The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells, especially can prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Heavy chain; reshaped; monoclonal; antibody; 225RE; human; epidermal growth factor; EGF; receptor; inhibition; growth; tumour; cell; late stage; prostatic; prostate; variable region; framework; complementarity determining region; CDR.
                                                                                                                                                                                          Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.

                                                                                                                                                                                                                                              The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAb) H225, 225RHC. The MAb is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                   Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

Claim 30; Fig 22; 112pp; English.

The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAD) H225, 225RHE. The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour calls, especially late stage prostatic tumour calls in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor

Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour. Example IV; Fig 16; 112pp; English.

- nsed

The present sequence is the heavy chain variable region of the chimeric monoclonal antibody (MAb) C225, which is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to thinbit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras cell cycle inhibitor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is the heavy chain variable region of the murine monoclonal antibody (MAD) M225, which is specific for the human epidermal growth factor (BGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stages prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor. (Updated on 27-AUG-2003 to correct OS field.)

                                            scFv(225) (AAW05133) comprises the single-chain binding region of murine monoclonal antibody 225, which is specific for the human epidermal growth factor receptor. It is encoded by plasmid pWW152-225 (see also AAT42033), constructed by cloning MAD 225 wh and VL region cDNAs into plasmid pWW152. Novel bivalent proteins (see also AAW6134-44), some of them including scFv(225) and an effector e.g. cytotoxin, can be produced in bacterial host cells, and are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                      Gaps

scFv(225)-ETA (AAW05135) comprises the single-chain binding region (see also AAW05133) of murine monoclonal antibody 225, which is specific for human epidedrmal growth factor receptor, joined to exotoxin A (ETA). It is encoded by plasmid psw202-225 (see also AAT42035) obtd. by 14gating an scFv(225) gene (AAT42033) into plasmid psw200 contg. the Pseudomonas acruginosa PAK ETA gene. The construct can be used to produce novel bivalent fusion proteins (see also AAW05136-44) in bacterial host cells, for use as antitumour agents

33131
Ig heavy chain V region - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 "#text_change 23-Mar-2001
C;Accession: 83131
C;Accession: 83131
A;Pescription: A humanized anti-tumor necrosis factor alpha monoclonal antibody that act
C,Accession: S14506
R;Chen, Q.; Stenzel-Pocre, M.; Rittenberg, M.B.
submitted to the EMBL Data Library, March 1991
A;Description: Natural polyreactive antibodies differ from Ag-induced antibodies in VH
A;Reference number: S14484
                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ·.

- CATALYTIC ACTIVITY: L-arginine + H(2)0 = L-ornithine + urea.

- CATALYTIC ACTIVITY: L-arginine + H(2)0 = L-ornithine + urea.

- SUBUNIT: Homographes.

- SUBUNIT: Homographes.

- SUBUNIT: BOCATION: Cytoplasmic.

- SUBULILLAR LOCATION: Cytoplasmic.

- INDUCTION: By arginine or homographine.

- SIMILARITY: Belongs to the arginase family.

-!- CATALYTIC ACTIVITY: L-arginine + H(2)O = L-ornithine + urea.
-!- COFACTOR: Manganese.
-!- PATHWAY: Arginine degradation via the urea cycle; first step.
-!- SUBUCELLULAR LOCATION: Cycoplasmic.
-!- SUBCELLULAR LOCATION: Cycoplasmic.
-!- SIMILARITY: Belongs to the arginase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .

of complete immunoglobulin heavy-chain genes.";
Nature 286:676-683 (1980).
-!- MISCELLANDOUS: THE SEQUENCE SHOWN IS TRANSLATED FROM A
DIFFERENTIATED GENE ISOLATED FROM A WYELOMA THAT SECRETES IGG2B.
-!- SIMILARITY: Contains 1 immunoglobulin-like domain.

"Molecular cloning of CDNA for nonhepatic mitochondrial arginase

(arginase II) and comparison of its induction with nitric oxide

T synthase in a murine macrophage-like cell line.";

FEBS Lett. 395:119-122 (1996).

- I- FUNCTION: May play a role in the regulation of extra-urea cycle

arginine metabolism and also in down-regulation of nitric oxide

synthesis (By similarity).

- I- CATALYTIC ACTIVITY: L-arginine + H(2)O = L-ornithine + urea.

- C-I- CATALYTIC ACTIVITY: L-arginine + H(2)O = L-ornithine + urea.

- C-I- CATALYTIC ACTIVITY: L-arginine + H(2)O = L-ornithine + urea.

- C-I- CATALYTIC ACTIVITY: L-arginine degradation via the urea cycle; first step.

- SUBUNIT: Homotrimer (By similarity).

- SUBUNIT: Homotrimer Companial.

- SUBUNITY: Belongs to the arginase family.
                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rattus norvegicus (kai).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DEVELOPMENTAL STAGE: First detected in neurula (stage 16/17). Highest levels in whole tadpole found around stage 47/48. In the intestine, increased levels are found during metamorphosis (stages 58-64). Low levels expressed in hindlimb until stage 66 after which, levels dramatically increase. In the tail, a constant high level of expression is found throughout metamorphosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    arginase genes during amphibian metamorphosis.";

1. Biol. Chem. 269:2538-25334(1994).

1. FUNCTION: As well as its role in the urea cycle, may be involved in tissue remodeling.

1. CATALYTIC ACTIVITY: L-arginine + H(2)0 = L-ornithine + urea.

1. COPACION: Manganese (By similarity).

1. PATHWAY: Arginine degradation; first step.

1. SBUNIT: Homotrimer (By similarity).

1. TISSUE SPECIFICITY: Expressed at differing tadpole stages in tail, intestine, hindlimb and trunk region. Most abundant in tadpole
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Xenopus laevis (African clawed frog).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
Sequence 37, Application US/08484537

Patent No. 6180370

GENERAL INFORMATION:
APPLICANT: OUEEN, Cary L.
APPLICANT: COLEN, Wan Sung
APPLICANT: CALNEDER, William P.
APPLICANT: CALNEDER, William P.
APPLICANT: CALNEDER, Wathleen L.
APPLICANT: CELINCH, Harold E.
TITLE OF INVENTION: IMPROVED HUMANIZED IMMUNOGLOBLINS
NUMBER OF SEQUENCES:
ADDRESSEE: Townsend and Townsend Khourie and Crew
STREET: 379 Lytton Avenue
CITY: Palo Alto
STATE: California
COUNTRY: US
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 73.9%; Score 65; DB 3; Length 119; Best Local Similarity 78.6%; Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Description: catalyzes ATP-driven formation of alanyl-D-alanine from 2 alanine molecul A; Description: catalyzes ATP-driven formation of alanyl-D-alanine molecul A; Dethway: cell wall synthesis A; Mote: two D-alanine-D-alanine ligases in E. coli (and S. typhimurium) encoded by two cthe two enzymes display remarkably similar catalytic efficiencies and substrate specific C; Superfamily: D-alanine-D-alanine ligase
C; Superfamily: D-alanine-D-alanine ligase motif 1
F; 245-276 (Region: D-alanine-D-alanine ligase motif 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Delanine-D-alanine ligase B [imported] - Escherichia coli (strain O157:H7, substrain R1 C;Species: Escherichia coli (C;Species: Escherichia coli (E;Species: Escherichia coli (E;Species: Escherichia (E;Species: Escherichia (E;Species: Escherichia (E;Species: Escherichia (E;Species: Escherichia (E;Species: Escherichia coli (E;Species: Escherichia coli (E;Species: Escherichia coli (E;Species: Escherichia coli (E;Species: Escherichia (E;Species: Escherichia coli (E;Species: Escherichia (E;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 12
AG0518
D-alanine, D-alanine ligase B [imported] - Salmonella enterica subsp. enterica serovar Typhi
C.Species: Salmonella enterica subsp. enterica serovar Typhi
G.Species: Salmonella enterica subsp. enterica serovar Typhi
A,Note: this species has also been called Salmonella typhi
C.Species: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
C.Accession: AG0518
